SHAH Trading – Company Profile

Construction & Industrial Chemical Supplier | Karachi, Pakistan

About Us

SHAH Trading supplies construction and industrial chemicals from Karachi, Pakistan: concrete admixtures, waterproofing products and SBR latex. We deliver nationwide and help customers choose and dose the right product for their application.

We supply construction projects and industrial customers. Send us your application or specification and we confirm what we can supply, with technical data sheets available on request.

Our Products

SNF / PNS A

Sodium Naphthalene Sulphonate Formaldehyde

High performance concrete superplasticizer for the construction industry. Improves workability and reduces water-cement ratio.

Inquire | QR / Data sheet

Industrial Grade

Sodium Gluconate

Used as a retarder in cement and concrete, and for surface treatment applications across multiple industries.

Inquire | QR / Data sheet

China / South Africa

Sodium Lignosulphonate

Natural polymer used as a dispersant, plasticizer and water reducer in concrete and industrial applications.

Inquire QR / Data sheet

Waterproofing Admixture

TAC 07

Specially formulated waterproofing admixture for concrete structures, protecting against water seepage.

Inquire QR / Data sheet

225kg Drum

Tac 501 (HR Superplasticizer)

Dark brown liquid, high-range water-reducing waterproofing admixture for structural concrete, used in sea walls, tunnels and basements.

Applications by Industry

Construction. Most of what we supply ends up on a construction site. **SNF / PNS A** is a concrete superplasticizer: it improves workability and lets a mix reach the required strength at a lower water-cement ratio, which matters on high-strength pours and in hot weather where slump is lost quickly. **Sodium Gluconate** works as a retarder, holding back the set so large pours stay workable and can be finished as one piece. **Sodium Lignosulphonate** is a natural polymer used as a dispersant, plasticizer and water reducer where a milder, lower-cost admixture is enough.
Waterproofing. TAC 07 is a waterproofing admixture for concrete structures, dosed into the mix to protect against water seepage rather than applied as a coating after the fact. **Tac 501** is a high-range water-reducing waterproofing admixture supplied as a dark brown liquid, used where the structure is in permanent contact with water — sea walls, tunnels and basements. It is supplied in 225 kg drums.
Agriculture, pharmaceuticals and manufacturing. Beyond construction, we supply industrial and laboratory chemicals to agricultural, pharmaceutical and general manufacturing customers. Product availability and grade vary by requirement, so send us the specification you are working to and we will confirm what we can supply against it.

Supply and Delivery

SHAH Trading operates from Karachi and delivers nationwide. Sodium Lignosulphonate is supplied from China and South Africa. Grades vary by product, so tell us the specification you need. Orders

are taken by phone, WhatsApp or email — the details are below — and we are open Monday to Saturday, 9:00 AM to 6:00 PM.
For a quotation, tell us the product, the grade or specification, the quantity, and where the material has to be delivered. If you are unsure which admixture suits the pour, describe the application and we will recommend from our range.
